

FOREST STEWARDSHIP

A HOLISTIC APPROACH

WATER CONSERVATION. SUSTAINABLE FOREST MANAGEMENT

Forests play a key role in the protection of water. So when private forest land owners manage forests sustainably, the benefits to water quality and quantity are long term.

WILDFIRE PREVENTION.

FIRE KNOWS NO BOUNDARIES

Private forest land owners have access to personnel and equipment to prevent and fight wildfires, protecting their own lands and often their neighbors' lands too.

RECREATIONAL ACCESS.

MUTUAL BENEFITS

When private forest land owners provide access to their lands, the public enjoys recreational opportunities and the landowner benefits from having the eyes and ears of responsible users on the ground.

PEST MANAGEMENT.

FROM FRIEND TO FOE

Private forest land owners practice management techniques that aim to minimize the negative impacts of insects, and maximize the positive impacts.

INVASIVE SPECIES CONTROL.

STOP THE SPREAD!

Private forest land owners are highly motivated to control invasive species, which left unchecked, will often out-compete native species.
